

Newton SO Series

OPEN-FRONT CCDs

DIRECT DETECTION SPECTROSCOPY

Key Specifications

- 1024 x 255 or 2048 x 512 high resolution matrix
- Peak QE up to 95% (soft x-ray region)
- TE-cooling down to -100°C
- Spectral rates up to 1,612 sps
- Plug-and-Play USB 2.0
- Labview and EPICS compatibility

Key Applications

- ✓ VUV/EUV/XUV Spectroscopy
- ✓ X-Ray Plasma diagnostics
- ✓ X-Ray Fluorescence (XRF)
- ✓ X-Ray Diffraction (XRD)
- ✓ X-Ray source characterization
- ✓ High Harmonic Generation (HHG)

INTRODUCING NEWTON SO

High Resolution, High Sensitivity and High Dynamic Range 'Direct' Detection

Andor's Newton series offers outstanding sensitivity performance through a combination of > 95% QE **back-illuminated** sensors, low noise readout electronics and industry-leading, maintenance-free **deep TE-cooling down to -100°C**. It features a 1024 x 255 (26 µm pixel) and a 2048 x 512 (13.5 µm pixel) matrix options optimised for **high dynamic range & high speed** and **high spatial resolution** Spectroscopy in the VUV and soft x-ray range.

A convenient 16-point, knife-edge sealed 6" rotatable CF-152 flange provides a **robust** and highly-effective seal to any compatible vacuum chamber interface. The Newton SO platform also offers a USB2 interface and Labview or EPICS compatibility for **seamless integration** into complex setups.

FEATURES & BENEFITS

| Feature | Benefit |
|--|--|
| Open-front end | DN100CF / 6" CF / CF-152 flange and knife-edge sealing provided as standard for direct interfacing to vacuum chambers. |
| 1024 x 255 and 2048 x 512 sensor options | Choice of high acquisition speed and dynamic range or high resolution. |
| 26 x 26 and 13.5 x 13.5 µm pixel size options | Ideal balance of dynamic range and resolution. |
| Peak QE up to 95% | High photon collection efficiency for maximising signal-to noise ratios. 'Enhanced' process back-illuminated sensor options for increased QE in the soft x-ray range. |
| Thermo-electric cooling down to -100°C | Efficiently minimizes dark current noise for acquisitions requiring longer sensor exposure time, obtain better signal-to-noise ratios faster. |
| Low noise readout down to 2.5 e ⁻ | Intelligent low-noise electronics offer the most 'silent' system noise. |
| Up to 5 MHz pixel readout speed (3 MHz for 940 model) | Slow readout for low noise and best SNR performance, faster speed for studying dynamic processes. |
| Cropped sensor mode | Specialized acquisition mode for continuous imaging with fast temporal resolution, spectral rates up to 1,600 sps. |
| USB 2.0 interface | Built-in robust plug and play interface as standard. |
| Enhanced baseline clamp | Slower readout for lowest noise, faster speeds for more rapid readout and focusing. |
| Software Development Kit (SDK) | Ease of control integration into complex setups: Matlab, Labview, Visual Basic, C/C++ or Linux. |
| Integrated in EPICS | Seamless integration and operation at EPICS-based particle accelerators. |
| Filter and filter holders options | Accommodate beryllium (or aluminium) windows with thickness down to 200 µm for removal of unwanted lower energy radiations. |
| Open-front to standalone converter options | Provides maximum flexibility – camera can attach directly to a vacuum chamber, or be used as standalone with a beryllium filter. |

Best Practice Guidelines

Condensation

- It is strongly advised that the camera should not be used in a condensing atmosphere.
- If used in a condensing atmosphere the sensor **MUST** be protected and the use of a cold finger is strongly recommended.

Contamination & Damage

- When not in use, the sensor chamber should be covered and sealed.
- Due to the exposed nature of the sensor, extreme care should be taken with the camera, as damage can easily occur through mishandling or by contamination.
- If the sensor becomes contaminated, due to accident or misuse, please contact Andor immediately for advice on cleaning.

Vacuum Operations

- Ensure that the vacuum environment to which the camera is fitted is free of water vapour and other contaminants.
- Care should also be taken to control pressure change, as sudden pressure changes can potentially cause damage to the sensor assembly.

Vacuum Units Equivalences

| Vacuum Regime | Pressure Range | | | |
|-----------------------|---|--|---|--|
| | mBar | bar | pascal (Pa) | Torr |
| Atmospheric pressure | $1.013 \times 10^{+3}$ | 1.013 | $1.013 \times 10^{+5}$ | $7.6 \times 10^{+2}$ |
| High vacuum | 1×10^{-3} to 1×10^{-9} | 1×10^{-6} to 1×10^{-12} | 1×10^{-1} to 1×10^{-7} | 7.5×10^{-4} to 7.5×10^{-10} |
| Ultra high vacuum | 1×10^{-9} to 1×10^{-12} | 1×10^{-12} to 1×10^{-15} | 1×10^{-7} to 1×10^{-10} | 7.5×10^{-10} to 7.5×10^{-13} |
| Extremely high vacuum | $< 1 \times 10^{-12}$ | $< 1 \times 10^{-15}$ | $< 1 \times 10^{-10}$ | $< 1 \times 10^{-13}$ |

CREATING THE OPTIMUM PRODUCT FOR YOU

DO 940 P - BEN

example shown

Step 1. Choose the sensor array size

Array Size

| Description | Code |
|------------------------|------|
| 1024 x 256 (255) array | 920 |
| 2048 x 512 array | 940 |

Step 2. Choose the sensor type option

Sensor
Type

| Description | Code |
|---|-------|
| Back Illuminated CCD, no AR coating | BN |
| Back-illuminated CCD, no AR coating, enhanced soft X-Ray QE | BEN |
| Front Illuminated CCD | FI |
| Back Illuminated, Deep Depletion CCD (920P only) | BR-DD |

Step 3. Select the required accessories and adapters

Accessories &
Adapters

| Description | Order Code |
|--|---|
| Re-circulator for enhanced cooling performance | XW-RECR |
| Oasis 160 Ultra compact chiller unit | ACC-XW-CHIL-160 |
| USB Extender: Icron USB 2.0 Ranger 2201 (100 m) - EU/UK/US | ACC-USBX-EU ACC-USBX-UK ACC-USBX-US |
| Copper gasket for DN100CF / 6" CF open-front camera knife-edge vacuum seal | ACC-FLG-SO-GSKT-CU |
| SO-SY adapter for Newton CCD, Ø45.5 mm filter | FLG-SO-SY-CONVERT-45 |
| Beryllium filter, Ø45.5 mm, 250 µm thick | ACC-OPT-02839 |

Step 4. Select the required software

Software

The Newton SO requires at least one of the following software options:

Solis for Spectroscopy A 32-bit and fully 64-bit enabled application for Windows (7, 8 and 10) offering rich functionality for data acquisition and processing. AndorBasic provides macro language control of data acquisition, processing, display and export. (Control of Andor Shamrock spectrographs and a very wide range of 3rd party spectrographs is also available).

Andor SDK A software development kit that allows you to control the Andor range of cameras from your own application. Available as 32 and 64-bit libraries for Windows (7, 8 and 10) and Linux. Compatible with C/C++, C#, Delphi, VB6, VB.NET, LabVIEW and Matlab.

Have you found what you are looking for?

Need a wider field of view? Andor's iKon-L SO 936 boasts a 27.6 x 27.6 mm active image area.

Need to detect harder X-rays? Andor offers a range of Indirect Detection cameras (HF range) that are compatible with industry-standard scintillators.

Need a standalone camera for X-ray? A custom built beryllium window is fitted as standard to our SY/HY range of cameras to block visible light.

Need a specific mounting? Contact our experienced design team so we can make the perfect fit.

Need a customized version? Please contact us to discuss our Customer Special Request options.

Items shipped with your camera:

- 1 x 2 m SMB-BNC connection cable
- 1 x 3 m USB 2.0 cable Type A to Type B
- 1 x PS-25 power supply with mains cable
- 1 x CD containing Andor user guides
- 1 x Individual system performance booklet
- 1 x Protective cover plate
- 4 x Fixing screws for cover plate ^{*10}

Footnotes: Specifications are subject to change without notice

1. **IMPORTANT:** Due to the sensor being exposed to environments outside of Andor's control there is no warranty on the sensor. For full details of Andor's Warranty Policy please refer to our webpage at www.andor.com/contact_us/support_request/. For key information on handling precautions for SO/HO open front end systems, please refer to the best practice guidelines on page 5. Note permanent damage can easily occur due to misuse.
2. Figures are typical unless otherwise stated.
3. Edge pixels may exhibit a partial response.
4. Based on a 920 camera with a horizontal pixel readout rate of 3 MHz, a vertical shift speed of 12.9 μ s and in crop mode for 20 Rows. Achievable spectral rates will vary with selected trigger mode.
5. Stabilized cooling temperatures are given for slowest readout speed. Use of faster readout speeds (in order to achieve faster frame rates) may require a higher cooling temperature to be selected. Specified minimum air cooled temperature assumes ambient temperature of 25°C. Specified minimum temperature with coolant assumes coolant temperature of 10°C. All cooling performance can be compromised by the environment to which the sensor is exposed.
6. Quantum efficiency of the sensor at 20°C, as supplied by the sensor manufacturer.
7. Readout noise is for the entire system and is taken as a mean over the sensor area excluding any regions of blemishes. It is a combination of sensor readout noise and A/D noise.
8. Dark current measurement is averaged over the CCD area excluding any regions of blemishes.
9. Linearity is measured from a plot of counts vs exposure time under constant photon flux up to the saturation point of the system.
10. Fixing screws for mounting the flange to a vacuum chamber are not included.

Minimum Computer Requirements:

- 3.0 GHz single core or 2.4 GHz dual or quad core processor
- 2 GB RAM
- 100 MB free hard disc to install software (at least 1GB recommended for data spooling)
- USB 2.0 High Speed Host Controller capable of sustained rate of 40 MB/s
- Windows (7, 8 and 10) or Linux

Operating & Storage Conditions

- Operating Temperature: 0°C to 30°C ambient
- Relative Humidity: < 70% (non-condensing)
- Storage Temperature: -25°C to 50°C
- Maximum Bakeout Temperature: +55°C

Power Requirements

- 100 - 240 VAC, 50 - 60 Hz
- Power Consumption: 48W max
